

HYDROMANTIS' NEW RELEASE OF GPS-X™ - VERSION 7.0 INCLUDES A NEWLY UPDATED USER INTERFACE, UPDATED HIGH-PURITY OXYGEN (HPO) AND CHEMICAL DOSAGE MODELS, AS WELL AS NEW HARDWARE KEYLESS LICENSING.

(Hamilton, ON Canada) – July 11th, 2017 - [Hydromantis Environmental Software Solutions, Inc.](http://www.hydromantis.com), (Hydromantis), the leading global provider of water and wastewater simulation software and professional modelling services, announced today the latest release of their flagship product GPS-X™, Version 7.0.

“Hydromantis is committed to providing the best and easiest-to-use software interface in the wastewater modelling industry. We strive on providing our users with the most intuitive and straightforward experience, so that their valuable time can be focused on getting results from their modelling work, and not on navigating the interface” said Dr. Spencer Snowling, VP of Product Development at Hydromantis. “The new interface features make our existing suite of advanced simulation tools easier to implement” he added.

The new release includes newly updated High-Purity Oxygen (HPO) and chemical dosage models, as well as improvements to the biological parameter sourcing function, and custom SRT definition and control functions. In addition, a new composite sampler object has been added, which allows users to create time-based or flow-based composite samples from a continuous stream of model output data.

Hydromantis is also now using a new purely software licensing system that will get rid of the need for USB hardware keys to run the software.

“With the release of GPS-X 7.0, Hydromantis shows its commitment to continually enhance and upgrade its software products to keep providing a best-in-class experience to its users” said Dr. Rajeev Goel, President and CEO at Hydromantis.

GPS-X™ introduced in 1992, was the first commercially available wastewater simulation technology and continues to be the industry’s tool of choice for the mathematical modeling, simulation and optimization of wastewater treatment plants.

About Hydromantis

[Hydromantis Environmental Software Solutions, Inc.](http://www.hydromantis.com) traces its roots back over 30 years as the global pioneer in the development of water and wastewater simulation technology. With bases in Canada and the United States, Hydromantis offers expert professional services for treatment plant modelling, design and optimization and is the developer and owner of the industry’s most advanced modelling and simulation software solutions including: GPS-X™, SimuWorks™, Toxchem™, CapdetWorks™ and WatPro™.
