

Point, Click, Design...

The simple, accurate wastewater treatment system preliminary design and costing tool just got better!

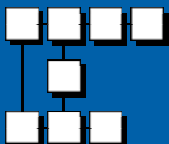

CAPDET Works

Version 2

Free demo can be
downloaded from:
www.hydomantis.com

New for Version 2

- **Export CapdetWorks Layouts to GPS-X!** It is now possible to export a CapdetWorks design to GPS-X (Hydomantis' dynamic wastewater treatment process simulator), which can be used to fine-tune the design. This functionality provides a direct link between Hydomantis' primary software products and will be extremely useful to those using both products.
- **Network Licensing:** Initially included in the limited release upgrade package (Version 1.03), CapdetWorks is now fully network compatible (i.e. site licensing) making it possible to have multiple users running the software concurrently over a wide or local area network using only one hardlock key.
- **New Unit Process Design Algorithms:** In addition to the 64 unit processes already in CapdetWorks, Version 2.0 includes two new unit processes.
 - o Sequencing Batch Reactor; and,
 - o SRT-based Plug Flow Activated Sludge.
- **New Currency Capability:** CapdetWorks version 2.0, has the capability to output the costs in any user-defined currency. Simply input a conversion rate and choose the appropriate currency from the list.
- **Breaking the Language Barrier:** CapdetWorks version 2.0 is now fully language compatible making it possible to have the interface translated into languages other than English.
