

NEWS RELEASE

For immediate release

April 2, 2010

Hamilton, Ontario - Founded in 1985, Hydromantis, Inc. is a unique employee-owned environmental engineering and software solutions company committed to excellence. The company began with a scientific R&D direction that led to producing the world's premier wastewater modeling and simulation software known as **GPS-X**.

We have been continually recognized as the world leader in environmental modeling and simulation software for the global wastewater and water treatment industry.

In 1998 Hydromantis, Inc. developed an environmental consulting engineering component in Cambridge for this purpose. The Hamilton Group remained committed to developing and producing leading edge environmental software solutions.

As Hydromantis, Inc. has evolved over the last 25 years a new strategic direction has emerged and as a result a valuable relationship been formed with two key benefits;

First, the Hydromantis Cambridge Engineering Group has merged with an industry leader to provide a powerful platform for collaboration, expertise, and resources.

Wardrop, a Tetra Tech Company has acquired the Hydromantis Cambridge Engineering Group.

"This is an exceptional opportunity for Wardrop," said Shayne Smith, President of Wardrop. "Broadening Wardrop's design and execution capabilities in the areas water and wastewater is an important component of our national Infrastructure expansion program. The integration of Hydromantis is a natural evolutionary step for us, and expands our technical skill base while broadening our geographic presence. We welcome the Hydromantis team to Wardrop."

Secondly, Hydromantis Hamilton in an effort to advance its continued independence and focus on scientific research and development has reorganized itself as **Hydromantis Environmental Software Solutions, Inc.**

Hydromantis Environmental Software Solutions, Inc. **will continue a relationship with its former Hydromantis/Wardrop Cambridge staff via “Strategic Agreement/MOU.**

“The dedication, synergies, and capabilities of each company’s experts to collaborate and design solutions that effect positive change on the global water and wastewater problems are truly a unique opportunity,” said Robert P Beres, Principal Director. *“The results of such collaboration and commitment will allow us to expand of our capabilities, existing client base and develop new software tools and solutions”.*

Wardrop, A Tetra Tech Company, is a multi-disciplined consulting and engineering firm that provides innovative solutions for the natural resource management, energy, and infrastructure markets globally. Wardrop currently has 1,000 employees who work collaboratively throughout its North American and overseas operations. Wardrop is part of Tetra Tech (NASDAQ: TTEK), a leading provider of consulting, engineering, program management, construction, and technical services. The combined companies have more than 10,000 employees worldwide and capabilities that span the entire project lifecycle.
